Tufte's design principles for graphical excellence

- Show the data
- Induce the viewer to think about the substance, rather than about methodology, graphic design, [or] the technology of graphic production
- Avoid distorting what the data have to say
- Present many numbers in a small space
- Make large data sets coherent
- Encourage the eye to compare different pieces of data
- Reveal the data at several levels of detail
- Serve a reasonably clear purpose
- Be closely integrated with the statistical and verbal descriptions

6. Show Cause and Effect

Magician Teller's definition of magic:

"The theatrical linking of a cause with an effect that has no basis in physical reality, but that — in our hearts — ought to."

7. Compare and Contrast

In Perspective: America's Conflicts

The current conflict in Iraq has entered in the age of digital warfare. Over the years, as technological advances changed the way America fought its wars, casualties in the battlefield and the cost of war tended to fall.

Sources: Department of Defense, Congressional Research Service, Robert P. Hall, Aerospace Historian

7. Compare and Contrast

The Fallen of World War II is an interactive documentary that examines the human cost of the second World War and the decline in battle deaths in the years since the war. The 15-minute data visualization uses cinematic storytelling techniques to provide viewers with a fresh and dramatic perspective of a pivotal moment in history.

The film follows a linear narration, but it allows viewers to pause during key moments to interact with the charts and dig deeper into the numbers.

Analysis Example: Motion Pictures Data

Analysis Example: Motion Pictures Data -- Lessons

- Check **data quality** and your assumptions
- Start with **univariate summaries**, then start to consider **relationships among variables**
- **Avoid premature fixation!**
- Even for “simple” data, a variety of graphics might provide insight. Tailor the choice of graphic to the questions being asked, but be open to surprises
- Graphics can be used to guide and help assess the quality of statistical models

Case Study: Antibiotic Effectiveness

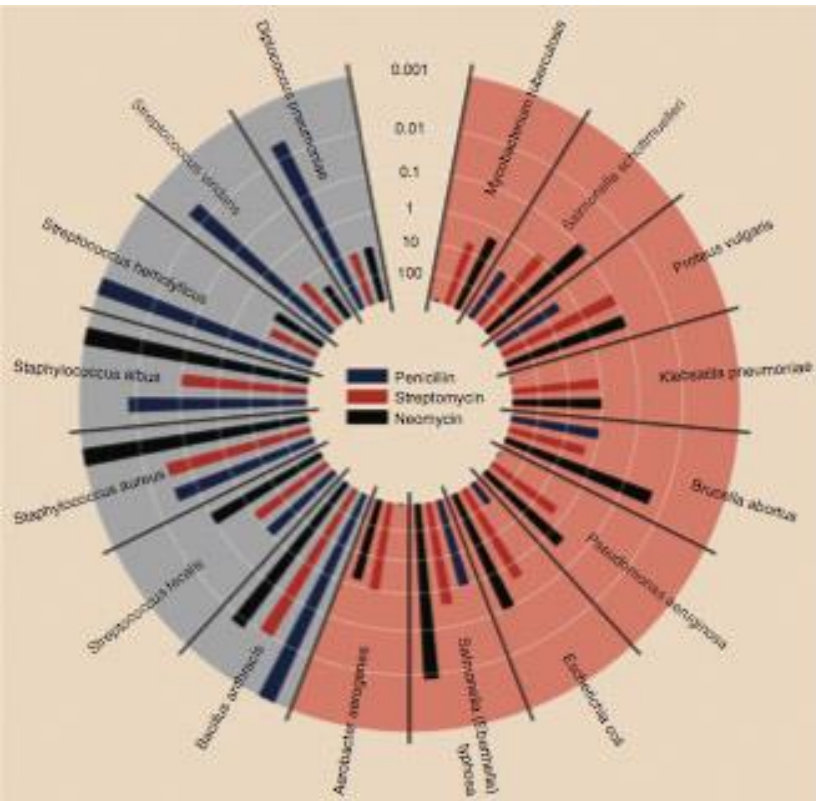

- In 1951, Will Burtin published a graphic display that was admired for the clarity and economy with which it showed the efficacy of three antibiotics on 16 different kinds of bacteria
- The dependent variable was the minimum concentration of the drug required to prevent the growth of the bacteria in vitro—the minimum inhibitory concentration (MIC)
- The three drugs were penicillin, neomycin and streptomycin, and their efficacy varied over six orders of magnitude
- The scale varies from 1,000 micrograms per milliliter to .001 micrograms per millilitre
- Lower is better, indicating less antibiotic is needed to treat the bacteria

Burtin's dataset: What questions might we ask?

Table 1: Burtin's data.

Bacteria	Antibiotic			Gram Staining
	Penicillin	Streptomycin	Neomycin	
<i>Aerobacter aerogenes</i>	870	1	1.6	negative
<i>Brucella abortus</i>	1	2	0.02	negative
<i>Brucella anthracis</i>	0.001	0.01	0.007	positive
<i>Diplococcus pneumoniae</i>	0.005	11	10	positive
<i>Escherichia coli</i>	100	0.4	0.1	negative
<i>Klebsiella pneumoniae</i>	850	1.2	1	negative
<i>Mycobacterium tuberculosis</i>	800	5	2	negative
<i>Proteus vulgaris</i>	3	0.1	0.1	negative
<i>Pseudomonas aeruginosa</i>	850	2	0.4	negative
<i>Salmonella (Eberthella) typhosa</i>	1	0.4	0.008	negative
<i>Salmonella schottmuelleri</i>	10	0.8	0.09	negative
<i>Staphylococcus albus</i>	0.007	0.1	0.001	positive
<i>Staphylococcus aureus</i>	0.03	0.03	0.001	positive
<i>Streptococcus fecalis</i>	1	1	0.1	positive
<i>Streptococcus hemolyticus</i>	0.001	14	10	positive
<i>Streptococcus viridans</i>	0.005	10	40	positive

Burtin's dataset: How do the drugs compare?

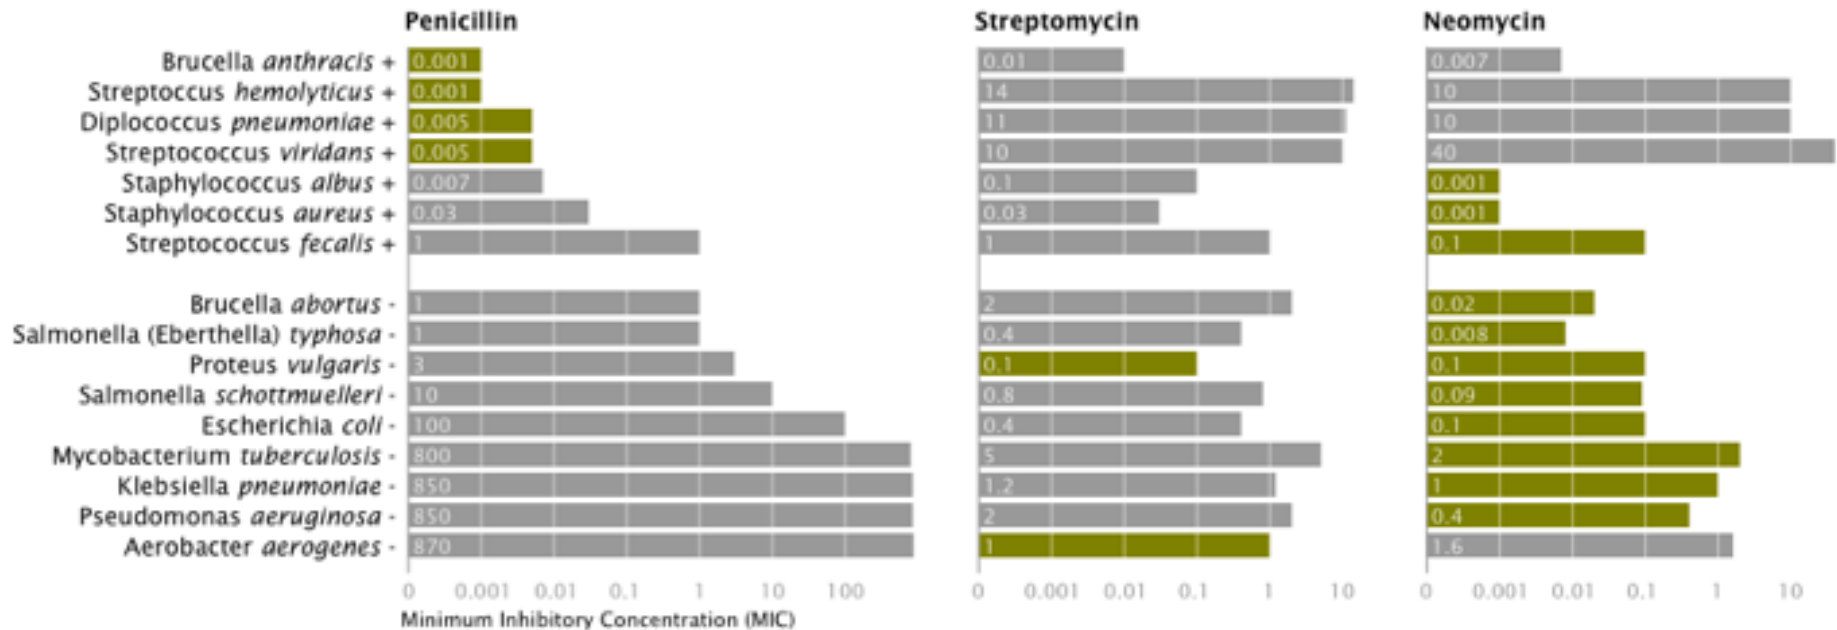

Bacteria	Penicillin	Antibiotic Streptomycin	Neomycin	Gram stain
<i>Aerobacter aerogenes</i>	870	1	1.6	-
<i>Brucella abortus</i>	1	2	0.02	-
<i>Bacillus anthracis</i>	0.001	0.01	0.007	+
<i>Diplococcus pneumoniae</i>	0.005	11	10	+
<i>Escherichia coli</i>	100	0.4	0.1	-
<i>Klebsiella pneumoniae</i>	850	1.2	1	-
<i>Mycobacterium tuberculosis</i>	800	5	2	-
<i>Proteus vulgaris</i>	3	0.1	0.1	-
<i>Pseudomonas aeruginosa</i>	850	2	0.4	-
<i>Salmonella (Eberthella) typhosa</i>	1	0.4	0.008	-
<i>Salmonella schottmuelleri</i>	10	0.8	0.09	-
<i>Staphylococcus albus</i>	0.007	0.1	0.001	+
<i>Staphylococcus aureus</i>	0.03	0.03	0.001	+
<i>Streptococcus fecalis</i>	1	1	0.1	+
<i>Streptococcus hemolyticus</i>	0.001	14	10	+
<i>Streptococcus viridans</i>	0.005	10	40	+

Assignment 2

In this assignment, you will design a visualization for a small data set and provide a rationale for your design choices. The choices you make will demonstrate your understanding of the data, visual and encoding principles you have learned so far.

The data set is a collection of measurements related to the IITB's Million Solar Lamp project -- demographics of beneficiaries, and the assembly, distribution & repairs of solar lamps in the Jhauba Block, Jhauba District of Madhya Pradesh state.

The data are summarised in multiples tables in given report. Your challenge is to combine these data in one single visualization that can fit in a A3 size paper. Submit a short write-up (1 page), providing a rigorous rationale for your design decisions. Explain the visual encodings you used and why they are appropriate for the data.

The best visualization will be incorporated into the final reports and duly credited. Assignment Due on 7 Mar 2016, 11:59 pm.
