

unhack

Jayati Bandyopadhyay

About

UnHack is a mobile application that protects your phone from malicious activities and makes the user aware of what information other applications are accessing. It also has an option to boost your phone. Power saving modes enable users to limit battery consumption of the phone. Browsing history of different browsers can be manipulated simultaneously from this application. Advanced users can also monitor CPU, RAM and Memory usage.

Home screen or landing page with performance boost option.

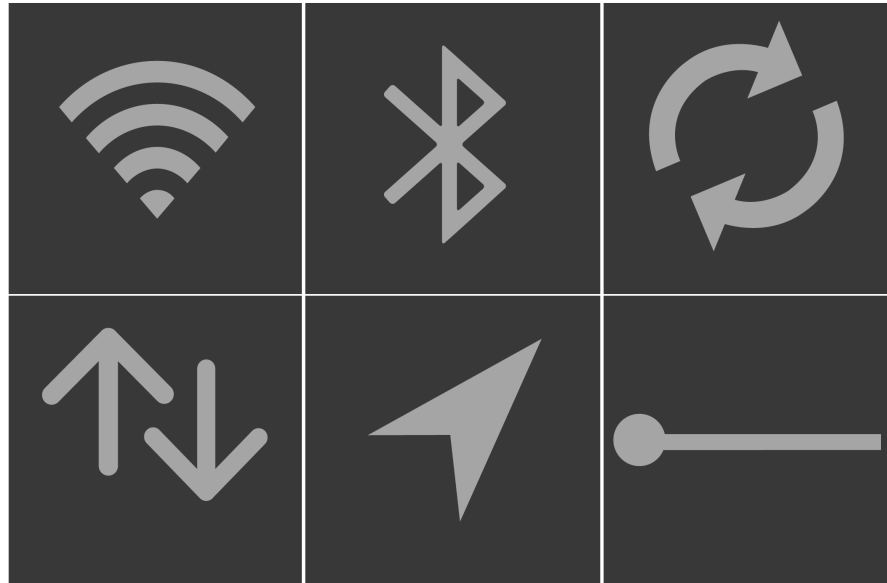

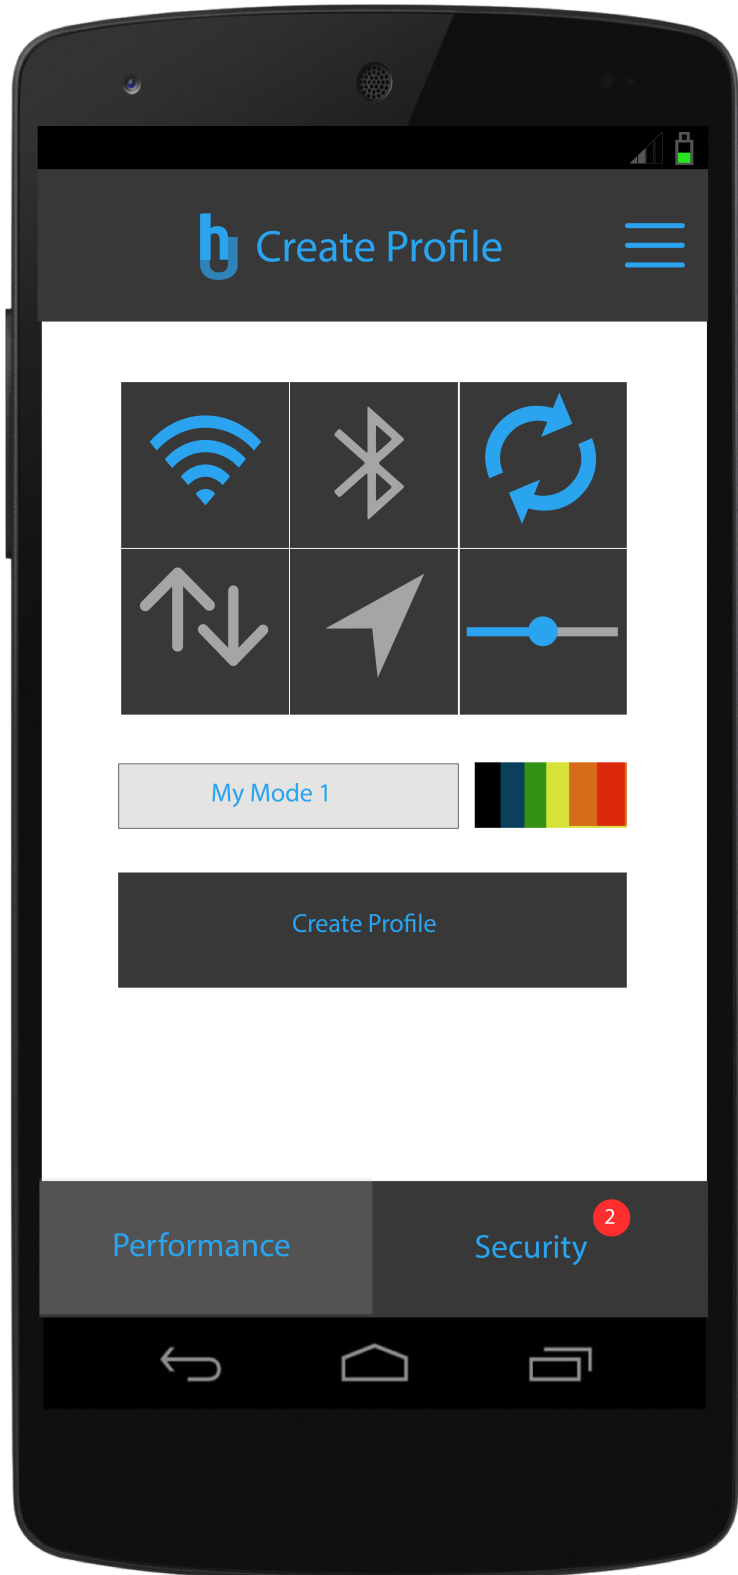

The button turns gray once the boost is complete.

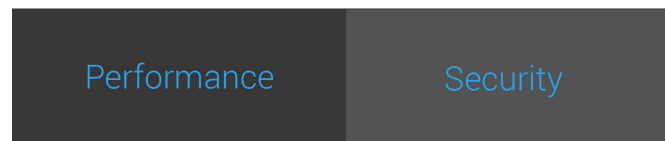

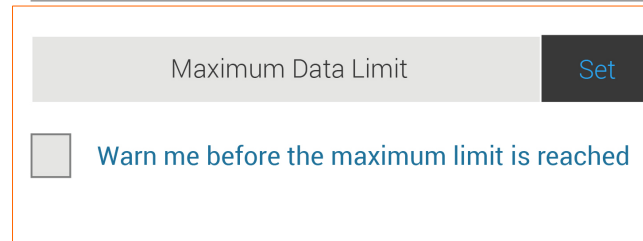

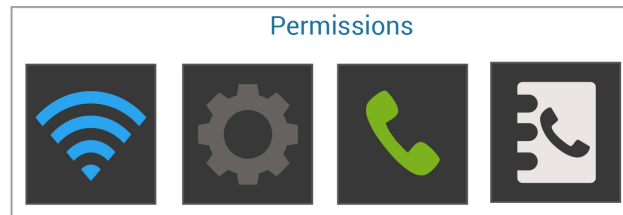

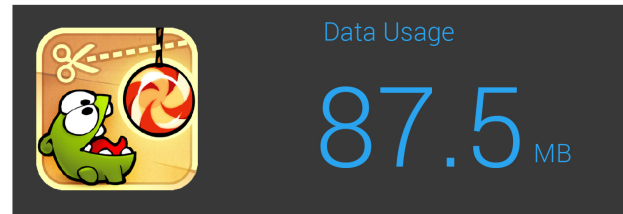

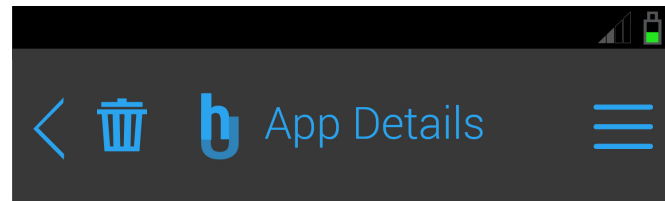

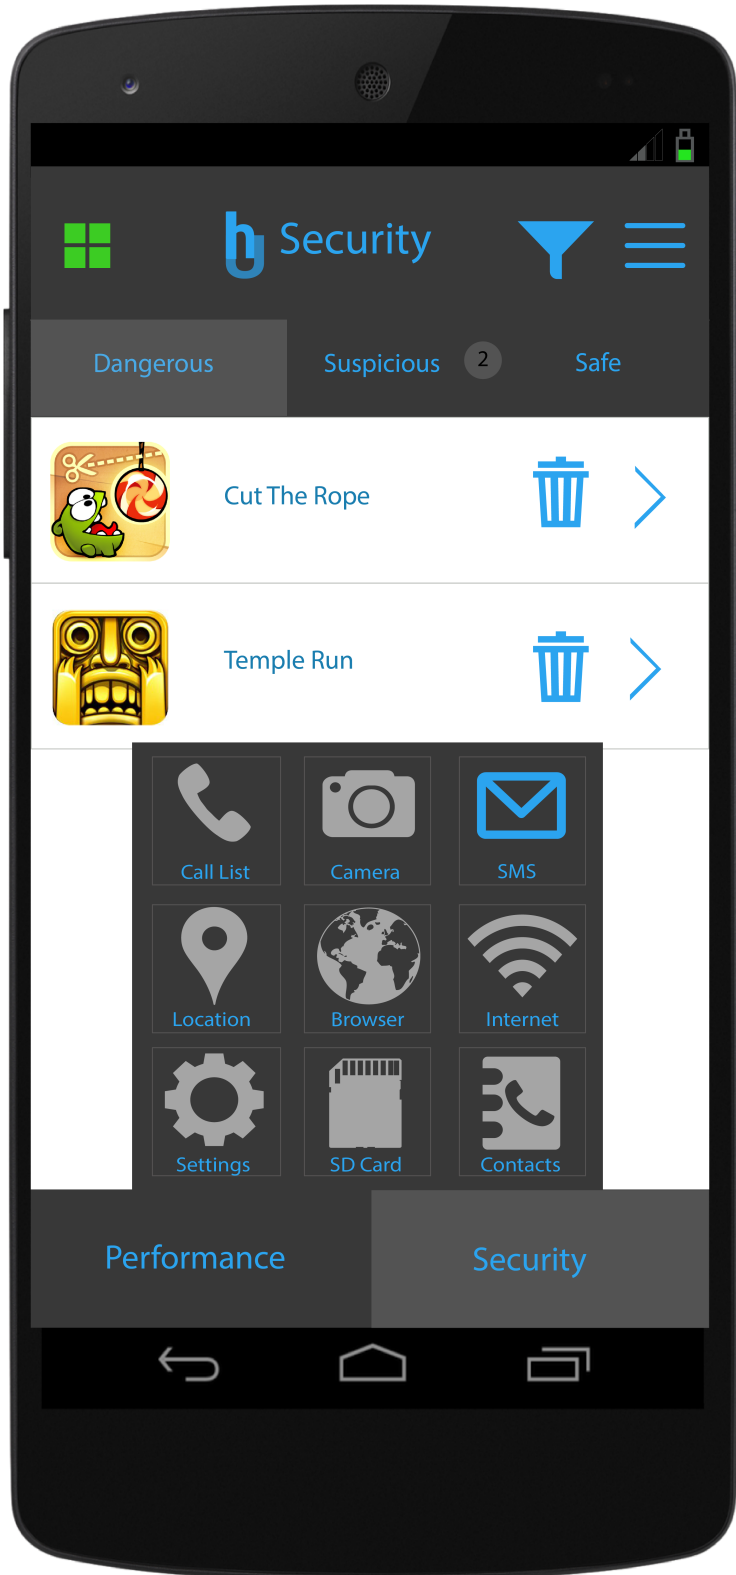

The color of the icons changes according to the mode the phone is been set to.

The hamburger in the performance tab has the following options.

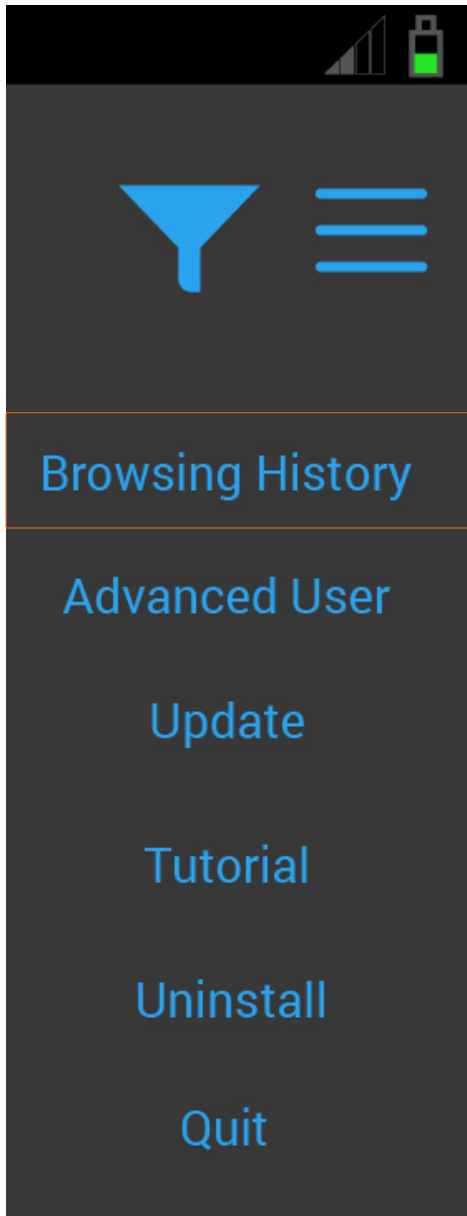

Create Profile allows users to set their own mode with specific features enabled or disabled.

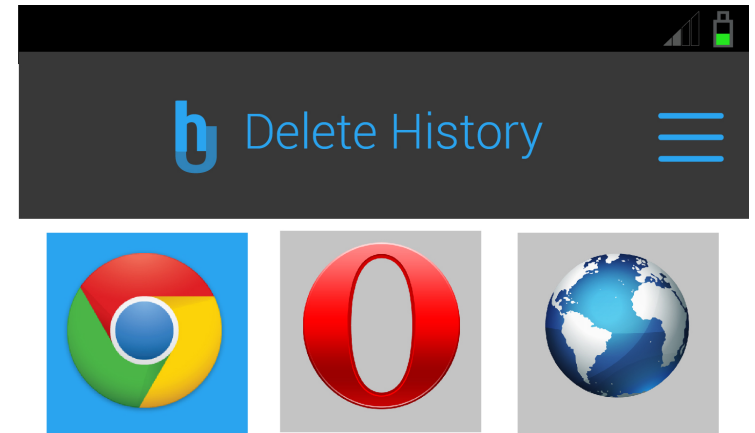

The filter option allows users to shortlist applications based on what they are accessing.

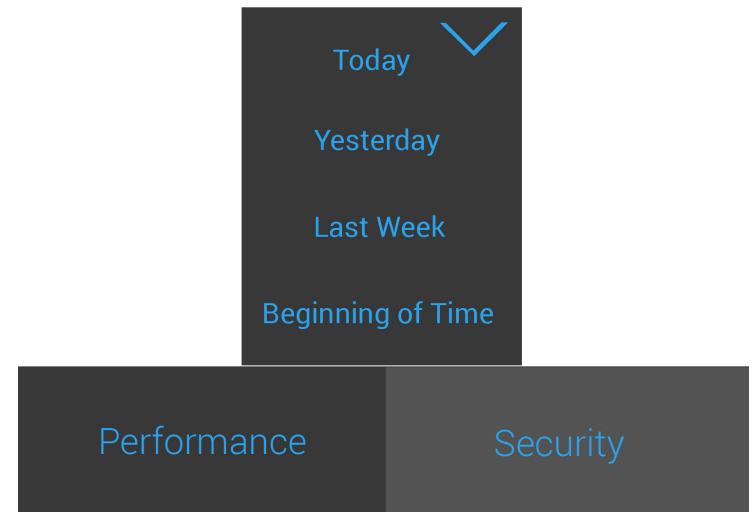

The details of what features each application is using can also be viewed. The maximum usage can be limited as well.

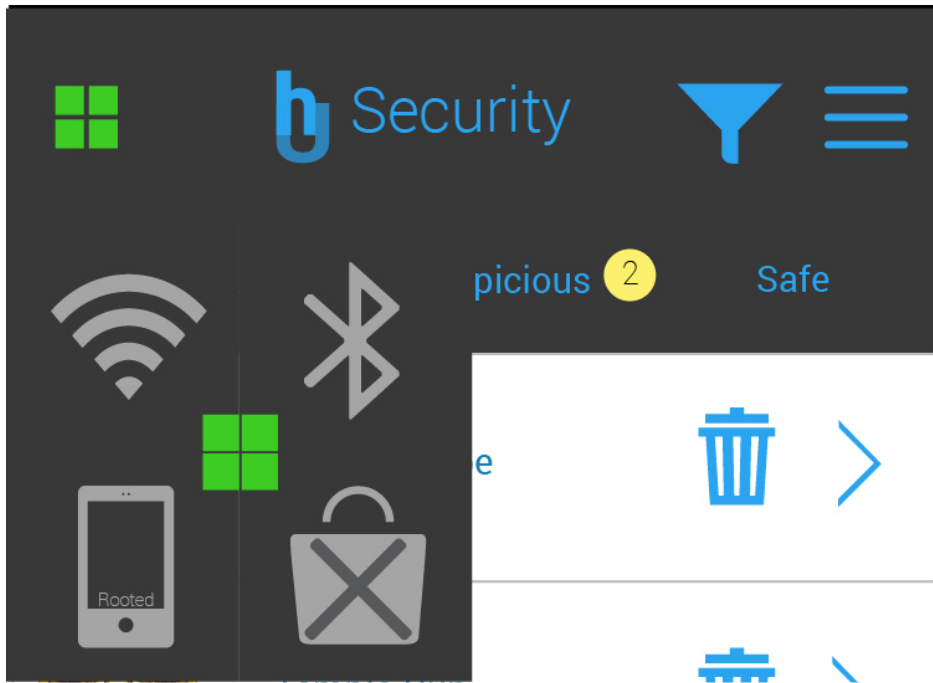

The options within the hamburger changes when the user goes to the security tab.

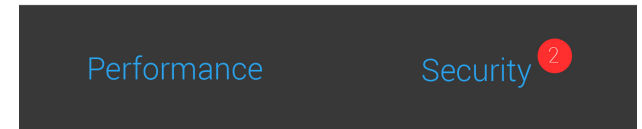

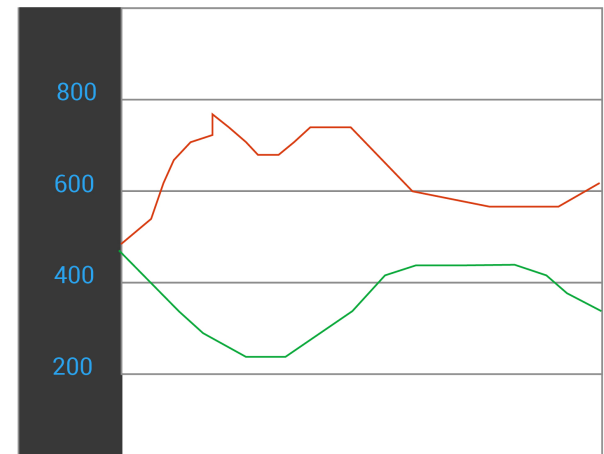

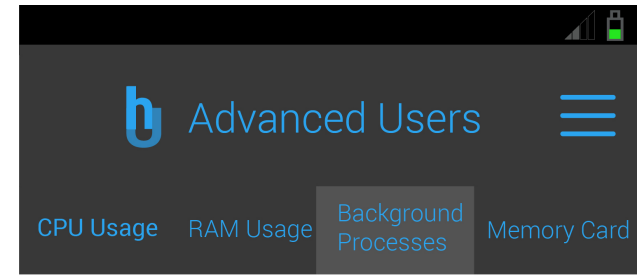

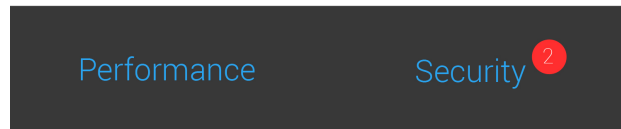

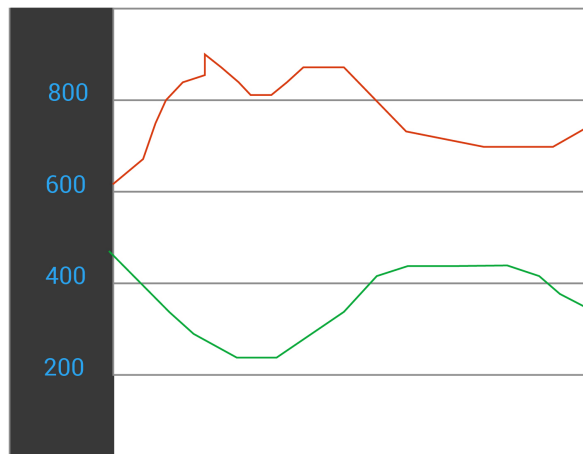

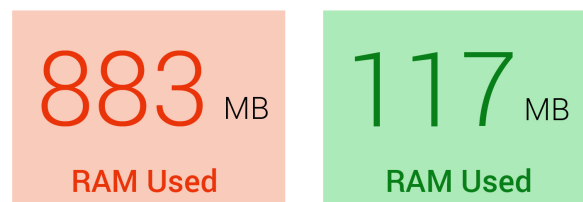

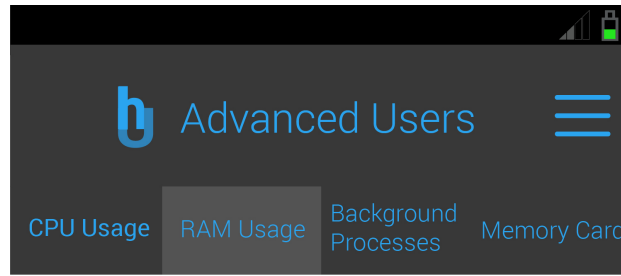

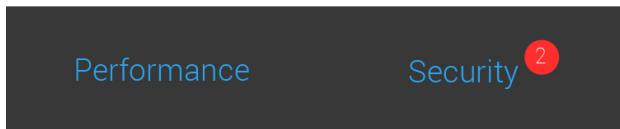

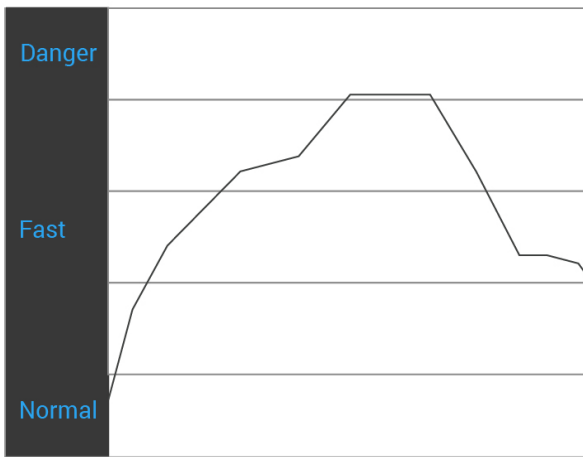

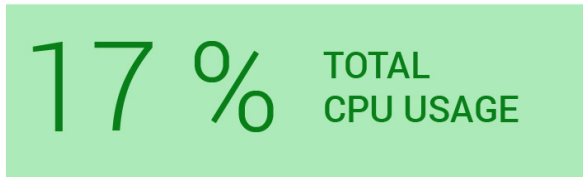

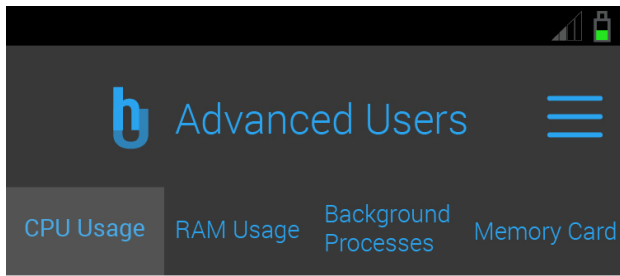

History of multiple browsers can be deleted simultaneously from the application.

The color of the four sub-parts of the grid changes with respect to the features enabled or disabled on the user's phone.

Advanced users can also monitor CPU, RAM and Memory usage and the number of background processes running on the phone.
